TEK-TAK™ System

Technical & Tactical Decontamination Kits

TEK-TAK System is a decontamination system for technical (personnel) and tactical (equipment).

The system provides the users with best of class and next generation decontamination components including the JGPD, JSEW, CIDAS integrated for best practice decontamination. The system is configured in two backpacks, one for the technical decontamination kit and one for the tactical decontamination kit.

Among the items included in the kits are:

- Decon Plus (Joint General Purpose Decontaminant/M333 equivalent) which is a low logistics three part chemistry blend at point of use with available water (fresh, brackish or salt). This technology was competitively tested in a multi-phase down-select acquisition program and found to be the best in-class against chemical, biological, TICs/TIMs, NTAs etc. Specific test data is available the DFOS Product Manager at JPM Protection.
- CBR Multi-Purpose Wipe Kits (Joint Service Equipment Wipes/ M334 equivalent) which is comprised of five prewetted wipes for immediate and operational decon of sensitive and non-sensitive equipment. This technology was competitively tested in a multi-phase down-select acquisition program and found to be best in-class against chemical, biological, radiological, TICs/TIMs, NTAs, etc. Specific test data is available through the DFOS Product Manager at JPM Protection. The chemistry used on the wipe is skin safe as well.
- CIDAS/Angentase (Contamination Indicator Decontamination Assurance system/M335) is a spray-on technology which identifies the presence of chemical warfare agents on surfaces to assist in decontamination of surfaces.
- DCON Mitt is an all-hazard, Berry Amendment compliant, microfiber mitt with chemical barrier lining to protect the user and prevent cross-contamination of agent. The Mitts highly absorbent material works well for removing liquid and dry contamination from surfaces. It can also be used with decontaminants for neutralization and removal of agents.
- Chemical barrier ground covers and medical litter covers fabricated from barrier materials which prevent contamination spread. When used in conjunction with medical litters, it can provide an easier surface for cleaning in between patients.
- Shuffle and tactical decontamination pits or pools fabricated from chemical barrier materials to prevent contamination spread. The materials provide superior chemical penetration resistance over traditional materials

The kits are configured as a basic system that can be customized for the services and operation requirements.

TEK - Technical (personnel) Decontamination Kit

TAK - Tactical (equipment) Decontamination Kit
