

FireBrake™

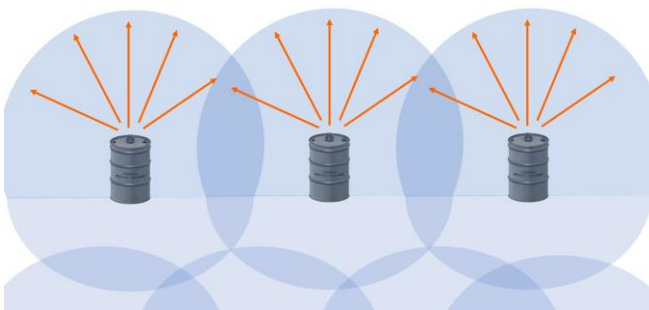

Facility/Home Protection

Provide Safe Passage/Egress

Prevent Fire Spread

Once the **FireBrake** system identifies an issue, the fire-retardant spray system can be rapidly deployed to protect assets and ensure safe passage to emergency responders and the public.

FireBrake provides next level detection, monitoring and fire protection from global industry leaders dedicated to protecting life and property. The **FireBrake** System integrates fire condition monitoring to provide immediate and accurate forecasting of wildfire conditions with deployable fire-retardant spray systems that can aid in creating a brake in the path of the fire or a safe path of egress for firefighters/people out of a threatening situation.

Fire monitoring can be installed as a permanent monitoring system integrating existing detection technologies currently in place or can be rapidly deployed to monitor an evolving events.

The fire-retardant spray system can be installed for safety prevent in wildfire prone areas or dropped in place providing a path to safety.

Developed to Protect the Public, our First Responders and Infrastructure
